(54) NETWORK IMAGE COMMUNICATION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a system enabling a user to quickly view a web page(WP) by improving the transmission speed of digital picture data to a destination computer(DC).

SOLUTION: An image compression program is used for reducing an original image file(IF), a server program(SP) is used for the purpose of forming a new WP from an original WP and the new WP consists of image reference for referring to the reduced IF instead of the original IF and a hyperlink for relating the image reference of the new WP to the reduced IF. When a browsing program of the DC sends a request, the SP sends the new WP and the browsing program displays the new WP, and when the hyperlink is triggered, the server transfers a WP including reference to the original IF to the DC and the browsing program displays the original digital IF.

LEGAL STATUS

[Date of request for examination] 21.04.2000

[Date of sending the examiner's decision of rejection] 09.03.2004

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
